

The Sharpener People

EZE-LAP Diamond products has been the pioneer and originator of diamond sharpeners since the early 1970's. Our patented diamond process and modern technology allows EZE-LAP to produce the finest quality diamond products for the lowest possible price.

The patented process of heat treatment that bonds the highest quality industrial grade diamond particles in a stainless alloy to a precision matched metal substrate has been imitated but has never come close to being duplicated. The resulting surface integrity from the EZE-LAP process measures about 72 on the Rockwell C hardness scale. By utilizing our technology, EZE-LAP has created a surface that works on carbide, ceramic, tool steel, hardened materials and newer stainless steels that are utilized by most major knife manufacturers today.

EZE-LAP manufactures a wide variety of diamond products. This allows the customer to pick and choose the model(s) they believe will best serve their needs.

The vast array of diamond sharpeners in the product line include small pocket size flat stones and compact, portable, round diamond sharpeners that are ideally suited for the fisherman, sportsman, or the outdoors person, to the larger diamond bench stones ideal for the workshop. There are even household and professional size diamond steels for the chef, gourmet, or meat cutter.

EZE-LAP manufactures products using five different diamond grits. This wide selection in diamond sizes allows you to match the right diamond surface to your specific sharpening application.

We at EZE-LAP feel that 98% of all sharpening can be performed by our fine (600) grit diamond. This fine grit diamond has the abrasive ability to effectively sharpen a dull knife in less than a minute and bring the edge to keen razor finish. The fine grit is offered on all EZE-LAP diamond products. Round sharpeners are available in the fine grit only. Flat sharpeners have the designation "F" to indicate the fine grit after the numbers, i.e. (26F or 72F).

When your job requires a surface that will sharpen quickly, but still leave a high quality finish (suitable for shaving), we offer a medium (400) grit diamond. Medium grit available on all flat tools and designated by "M" after the model number. i.e., (26M or 72M).

For those who wish to get the job done fast but are still interested in a good quality finish EZE-LAP offers a coarse (250) grit diamond. This diamond surface lends itself well for sharpening axes, shovels, garden tools, industrial shop tools and de-burring application. Coarse grit is also offered on all flat tools. Designated "C" after the model

number to indicate coarse grit, i.e. (26C or 72C).

For very fast metal removal try our extra coarse (150) grit diamond for roughing in or prepping for final finish. Extra coarse grit is available on all flat tools. Designated by "XC" after the model number, i.e. (26XC or 71XC).

To achieve the ultimate in a polished finish try our Super Fine (1200) grit diamond surface. It is designed to polish and fine finish to mirror perfection. Ideally suited for woodworking and industrial application where only perfection is tolerated. Available on selected flat products, check designation "SF" after the number for ordering, i.e. (66SF or 81SF).

In addition to the flat and round sharpeners, EZE-LAP offers several special use diamond sharpening tools, which include chain saw sharpeners, needle files, flat hand files, and oval sharpeners. We also have a complete line of diamond lapping compounds and slurries. Diamond powders available in DuPont Mypolex, monocrystalline, and natural origins, in sizes from 1/10 micron and up.

EZE-LAP boasts about its quality. We are proud to offer the flattest, most consistent production diamond tools available on the market today. Even after years of satisfaction, EZE-LAP customers are still amazed at the quality and consistency of the finishes that are achieved by the diamond tools. This kind of quality is achieved by a product entirely made in the U.S.A. and we take pride in that!

Round Diamond Sharpeners

Our most versatile sharpeners. These models can sharpen anything - knives, scissors, etc. Some models have grooves for fish hooks. Model "M" the sportsman's favorite, comes with a handy belt pouch. The "G" and "P" models are great for home, camping or professional use.
